

Senior Geotechnical Engineer in the Godalming Office

Having recently recruited four new members of staff in our regional offices and strengthened our management team at Head Office, Card Geotechnics (**CGL**) is currently seeking an enthusiastic and dynamic Senior Geotechnical Engineer looking to develop their skills and career in our new Godalming head office.

Our clients, which include national residential developers, major international contractors and associated professionals, commission us on projects that vary in size and nature both in the south-east of England and across the United Kingdom. **CGL** has had a very successful 2011, which included record workload levels and an award for “*imaginative, innovative and bold*” value engineering from Ground Engineering.

The successful candidate will have graduated with a degree in civil engineering or engineering geology and will have had 4 to 6 years’ experience with a specialist consultancy, or in a geotechnical/ geoenvironmental department of a larger consultancy. A further specialist post graduate degree will be an advantage and chartered candidates will have a distinct advantage in the selection process. You will have a sound understanding of UK geology and/or UK construction practice and be looking to build on your prior experience by taking on challenging projects and more responsibility. Demonstration of experience and expertise in the assessment of ground conditions, geotechnical design and modelling, and relevant codes and standards will be essential. A general knowledge of geoenvironmental engineering and its interaction with geotechnical design will be necessary and excellent report writing skills will be required. You will be expected to combine site work with the challenge of design work and analysis and project management in a dynamic office environment.

We are able to offer you:

- A competitive salary and performance bonus
- Excellent project experience
- A stimulating and friendly working environment
- Early responsibility
- Opportunities to progress your career.
